ADDED REQUIREMENTS FOR THE PROJECT

1. USER REGISTRATION- This enables a user of the system (patient, doctor) to create an account to track medical history. They require a username and password to create it.

2. Each drug is kept in an *inventory* that has the drug id, drug quantity, and drug expiration date.

3. Each doctor gives a dosage to each patient and it has dosage frequency, and duration

4. Each patient has a reminder that enables them to keep track of their medication intake and it has reminder id, patient id ,drug id and reminder time.

5. Each user should be able to access a *report* to see their medical history which entails username id,report id and drug id.
